

Jamilah Bello

Full Stack Engineer | SaaS Architecture | Regulated Platforms

Sydney, Australia | +61 411 443 239 | jamilahbello@outlook.com | Portfolio: <https://portfolio-acqa.vercel.app>

SUMMARY

Full Stack Engineer with 3+ years of experience designing, building, and improving SaaS, fintech, blockchain, ESG, and compliance-aligned platforms. Strong background across TypeScript/JavaScript, React, Next.js, Node.js, REST APIs, database design, RBAC, CI/CD, and scalable platform workflows.

Known for translating ambiguous business and regulatory requirements into structured technical systems, identifying architectural risks early, and creating implementation-ready designs that improve delivery clarity. Comfortable working across product, engineering, compliance, and business stakeholders to shape practical software decisions that balance quality, speed, operational risk, and long-term maintainability.

CORE CAPABILITIES

Software Engineering	Architecture & Systems	Collaboration & Delivery
• Full-stack application development • SaaS platform design • REST API design and integration • Backend workflow design • Database schema design • Authentication and role-based access control • CI/CD and release workflows • Frontend architecture and reusable UI components • Debugging, troubleshooting, and production-readiness thinking	• Multi-tenant architecture • Data workflows and traceability models • Service boundary thinking • Platform scalability and maintainability • Governance-aligned system design • Risk and quality controls • Regulatory-to-technical translation • Business-to-technical translation • Technical documentation and implementation planning	• Stakeholder alignment • Ambiguous requirement clarification • Cross-functional collaboration • Technical ownership • Delivery clarity • Operational process improvement • Commercial and practical engineering judgement

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, React Native

Backend: Node.js, Express, REST APIs, PHP

Data & Databases: MongoDB, MySQL, database schema design, data workflows

Architecture: SaaS systems, multi-tenant architecture, RBAC, JWT, API design, governance-aligned workflows, traceability models

DevOps & Tools: Git, GitHub, GitLab, Postman, CI/CD pipelines, Vercel

Quality & Delivery: Debugging, troubleshooting, backend testing, release workflows, risk controls, quality controls, technical specifications

PROFESSIONAL EXPERIENCE

Technology Innovation, Research & Implementation Specialist | Better Ideas Pty Ltd – Sydney, Remote | Nov 2025 – Feb 2026

- Architected ESG Navigator, a multi-tenant ESG analytics platform designed for enterprise reporting, compliance visibility, and governance workflows.
- Translated product strategy and regulatory concepts into structured technical specifications that enabled implementation planning.
- Identified and resolved critical architectural gaps across aggregation logic, tokenisation, tenancy, and data lineage before development began.
- Designed system architecture and data workflows aligned with the Microsoft Fabric ecosystem.
- Defined traceability models to support audit-ready reporting and governance-aligned system behaviour.
- Established a PRINCE2-style delivery framework from scratch, including PID, Work Packages, risk controls, and quality controls.
- Reduced ambiguity across stakeholders by converting complex product, compliance, and technical concerns into build-ready decisions.
- Operated as sole technical owner, bridging business, compliance, and engineering priorities.
- Applied systems thinking to balance regulatory expectations, platform scalability, workflow clarity, and practical delivery constraints.

Software Engineer | Funding.com.au – Gold Coast, Remote | Jul 2023 – Jan 2025

- Delivered frontend features for a fintech lending platform supporting brokers, customers, and internal operations teams.
- Reduced manual workflows by digitising loan and operational processes.
- Improved API interaction clarity by reducing redundant calls and simplifying integration behaviour.
- Enhanced backend testing approach, improving developer efficiency and reducing implementation complexity.
- Built reusable UI components and admin tools to support internal workflows and platform operations.
- Collaborated closely with stakeholders to translate business requirements into working platform functionality.
- Worked in a regulated financial services environment where reliability, workflow clarity, access control, and operational risk were important delivery considerations.

Software Engineer | Labrys Group Pty Ltd – Brisbane | Feb 2022 – Jul 2023

- Developed blockchain-integrated user interfaces for NFT minting, purchasing, and asset management workflows.
- Integrated web3 wallet functionality, including Rainbow Wallet, to support transaction execution and user authentication flows.
- Handled asynchronous transaction states, failures, loading states, and user feedback across decentralised systems.
- Built reusable frontend components aligned with product requirements and client branding.
- Collaborated with smart contract and backend teams across multiple client projects.
- Improved user-flow clarity across transaction-heavy interfaces where failed, pending, and confirmed states required careful handling.

EDUCATION

Master of Information Technology, Artificial Intelligence | Charles Darwin University | 2025 – Present

BSc (Hons) Computer Science | University of Kent | 2013 – 2017

SELECTED ENGINEERING IMPACT

- Architected ESG Navigator, a multi-tenant ESG analytics platform for enterprise reporting and governance.
- Designed tenancy, aggregation, tokenisation, data lineage, and traceability workflows before implementation.
- Built backend systems from scratch, including REST APIs, database schemas, authentication, RBAC, CI/CD, and operational workflows.
- Improved fintech platform workflows by digitising manual processes, clarifying API interactions, and supporting internal tooling.
- Delivered blockchain-integrated user interfaces handling asynchronous transaction states, wallet interactions, and decentralised asset flows.
- Built real-time transaction monitoring, dispute resolution, and reconciliation tools for payments and financial operations.
- Operated across regulated or compliance-sensitive environments involving auditability, workflow traceability, access control, and operational reliability.

ADDITIONAL STRENGTHS

- Strong written communication and technical documentation
- Comfortable translating messy requirements into structured delivery plans
- Strong empathy for users, customers, and internal support teams
- Able to work across engineering, product, business, and compliance conversations
- Practical judgement around trade-offs, implementation risk, and maintainability
- Strong ownership mindset in early-stage or unclear technical environments
